## User-assigned code elements

User-assigned code elements are codes at the disposal of users who need to add further names of countries, territories, or other geographical entities to their in-house application of ISO 3166-1, and the ISO 3166/MA will never use these codes in the updating process of the standard. The following alpha-3 codes can be user-assigned: AAA to AAZ, QMA to QZZ, XAA to XZZ, and ZZA to ZZZ.<sup>[5]</sup>

## Examples

The following codes are used in ISO/IEC 7501-1 for special machine-readable passports.<sup>[2]</sup>

- EUE is used for the European Union laissez-passer<sup>[6]</sup>
- XOM is used to represent the Sovereign Military Order of Malta
- XP0 is used for Interpol travel documents

- XXA is used to represent a stateless person, as defined in Article 1 of the 1954 Convention Relating to the Status of Stateless Persons
- XXB is used to represent a refugee, as defined in Article 1 of the 1951 Convention Relating to the Status of Refugees as amended by the 1967 Protocol
- XXC is used to represent a refugee, other than as defined above
- XXX is used to represent a person of unspecified nationality

NATO STANAG 1059 INT is built upon ISO alpha-3 codes, but also defines alpha-2 codes incompatible with ISO 3166-1. It introduces several private use codes for fictional countries and organizational entities:

- XXB "Brownland"
